

## **Book Review on “Administration of Social Welfare”**

**Hsiung-Sheng Chang**

Assistant Professor, Department of Social Work, Soochow University

### **Abstract**

This article introduces the key contents and characteristics of the book “Social Welfare Administration”. From sorting out the development process of public administration and management, we can understand “social welfare administration” as the application of management principles (methods) to the organizational operations of government social departments and the promotion of social welfare policies. Secondly, from the process of discussing other domestic “Social Welfare Administration” textbooks, I found that this book focuses more on the connotation and implementation process of social welfare administration, but emphasizes the application of management and the execution process of administration. Finally, this article suggests that this book can add case descriptions of administrative techniques or homework exercises for grassroots bureaucratic staff, and to increase the critical perspective on structural imbalances and power relations within social welfare administrative bureaucracies, or add content based on personal experience to expand the book’s perspectives.
